

Asset Management Web Application

Unified Financial Tracking Platform

Olukorede Oduniyi

The Need for Unification!

The Problem:

Asset management is currently fragmented. Users have to juggle separate apps for Stocks, Crypto, and Property.

The Solution:

This project creates a single, unified web dashboard to track all asset classes in one place.

Core Value:

- **Consolidated View:** Users get a complete overview of their personal wealth.

- **Live Tracking:** Real-time data for stocks and cryptocurrencies.

- **Goal Monitoring:** Visualizes progress toward long-term financial goals.

Why This Project Matters?

Scattered Data:

Investors currently lack a single source of truth for their wealth.

Platform Silos:

Trading 212:
Restricted to
Stocks & ETFs.

Coinbase: Restricted to Cryptocurrency

The Gap:

No combined view of total net worth and no ability to set unified financial goals across different asset classes.

Core features

System Architecture / Technology Choices

Frontend Implementation

Add Stock

Ticker Symbol

Company Name

Quantity

Average Purchase Price

This image shows a modal form for adding a new stock to a portfolio. The form is titled 'Add Stock' and contains four input fields: 'Ticker Symbol' (with 'AAPL' entered), 'Company Name' (with 'Apple Inc.' entered), 'Quantity' (with '0' entered), and 'Average Purchase Price' (with '150.00' entered). At the bottom, there are two buttons: 'Cancel' and 'Add Stock'.

Add Crypto

Ticker Symbol

Asset Name

Quantity

Average Purchase Price

This image shows a modal form for adding a new cryptocurrency to a portfolio. The form is titled 'Add Crypto' and contains four input fields: 'Ticker Symbol' (with 'BTC' entered), 'Asset Name' (with 'Bitcoin' entered), 'Quantity' (with '0' entered), and 'Average Purchase Price' (with '150.00' entered). At the bottom, there are two buttons: 'Cancel' and 'Add Crypto'.

Database Entities

Key REST API Endpoints

- GET /api/users/{id} - Get User
- POST /api/stocks - Add Stock
- GET /api/goals - List Goals

Key Achievements So Far

Asset Tracking

UI designed for adding and viewing stock and cryptocurrency holdings.

Portfolio Dashboard

Portfolio Overview interface implemented, showing the structure for future real-time monitoring.

Financial Goals

Goal-setting interface completed, with functionality to add new financial goals.

Smart News

Personalised news feed UI created, ready to integrate with asset-specific data.

Secure Access

Implemented robust Firebase authentication for secure login and data protection.

Polished UI

Established a clean, consistent, and responsive user interface across the platform.

Future Development Steps

Advanced Analytics

Upgrade the analytics engine to provide deeper performance metrics and faster load times.

Enhanced Visualization

Implement advanced charting libraries for richer, interactive historical data analysis.

Smart Alerts

Add intelligent notifications to keep users updated on market shifts and goal milestones.

Security Fortification

Harden backend infrastructure with advanced encryption layers to protect sensitive financial data.

Full Asset Control

Finalize comprehensive Create, Read, Update, and Delete (CRUD) functionality for all asset classes.

Real-Time Automation

Integrate live market data APIs to automate daily stock and cryptocurrency price updates.
